Plate 01

The threshold

The one screen that belongs to no region. Structurally unchanged since V0.1 — no navigation, no menu, no claim about who he is — but repainted into the new family. The map runs behind the vignette; fragments of thought surface and fade.

THE REGION OF

PHILOSOPHY

REGION

a question allowed to stay open

philosophy

Where a question is allowed to stay open long enough to become interesting.

REGION

love

The hardest thing here to think clearly about, which is exactly why it is here.

ATTACHMENT	reaches 2 others
VULNERABILITY	reaches 2 others
INTIMACY	reaches 2 others
DISTANCE	reaches 2 others

WANDER FROM HERE →

A vertical axis with reaches extending from either side and never meeting, concepts arranged facing each other across the gap, and the widest negative space in the system. Attachment, vulnerability, intimacy, distance. No hearts, no pink — treated with the same seriousness as Philosophy, which is the only way it earns the room.

The test the brief actually specifies.

Philosophy · Human Behaviour · Business — Technology · Music · Love. Titles left visible for reference, but cover them and the environments still separate. Then look only at the nodes and lines: identical in all six. Same mind, different mental climate.

The neurons became the constant.

V0.4 gave every MIG its own node scale, edge style and label tracking. That was the wrong axis to vary, and V0.5 removes all of it.

ONE OF EVERYTHING

One `shape()` routine, one edge path, one label treatment, for the whole site. The world configs carry no `node` or `edge` key at all.

The acceptance test fails the build if one reappears, so the constant cannot erode quietly over a later iteration.

WHAT VARIES INSTEAD

Each world declares an `environment painter`, a `ring arrangement` for its minor IGs, and a `ground / ink / accent` triple.

Those three colours ease per frame rather than switching, so crossing a border reads as a change of light rather than a page load.

MEASURED, NOT TUNED

Ring position is derived from the measured bounding box of whatever each world places at the top.

Philosophy's title is enormous and Music's is eleven pixels at the bottom; both compose correctly at any viewport with no per-world constant. A first attempt using twelve hand-tuned reserves was fragile and still collided.

Shared chromatic DNA, different visual grammar.

Each world sets its own balance of one colour family rather than its own palette. Two are light-ground, which forced a real fix: on a pale ground a soft dark radial reads as a smudge, so the atmospheric fields are damped to a third of their strength there.

MIG	GROUND	ENVIRONMENT	ARRANGEMENT	READS AS
philosophy		editorial layers	wide circle	too many thoughts at once
human behaviour		translucent strata	mirrored arcs	a system observing itself
business		white architecture	columns	strategy made visible
technology		modular components	lattice	the architecture behind a system
building		blueprint, dimensioned	assembly row	mid-construction
learning		branching growth	branching	a model assembling itself
observation		annotated paper	scatter	a notebook that is alive
life		horizon, vast field	timeline	expansive and temporal
music		rhythmic intervals	wave	rhythm, not interface
movies		letterbox and cuts	strip	scenes in sequence
food		grain, cropped close	cluster	tactile and intimate
love		axis and reaches	facing	proximity, and the distance across it

Blue, white, black, grey — proved by machine.

 BLACK #05070A	 NAVY #0B1626	 GRAPHITE #222833	 BLUE #4C8DFF · signal	 GREY #A5AFBD	 OFF-WHITE #EEF1F5
---	--	---	---	--	---

THE RULE IS ENFORCED, NOT INTENDED

The validator classifies every hex and `rgb()` literal in the page. A colour is legal only if it is near-neutral — highest channel minus lowest at most 14 — or blue-dominant. Anything warm fails the build.

The oxidized red that carried V0.1 through V0.4 is fully retired, and a separate check asserts it never returns.

BALANCE, NOT PALETTE

Business runs roughly ninety per cent white and graphite with one blue rule. Music is ninety per cent black with white ink and a trace of blue. Human Behaviour is navy-dominant with translucent greys.

Blue stays semantic throughout: the selected node, the active relationship, the rule beside emerging content. It is never used to make a screen more interesting.

Twenty-eight criteria, checked by machine.

The acceptance suite was rewritten for V0.5. Two of its checks were wrong on first run and flagged the build incorrectly — one matched the phrase “back to” inside the content prose, the other flagged the threshold vignette as decoration. Both were faults in the test, corrected there rather than in the page.

01–05	Global consistency.	One neuron system, one UX, one chevron, one colour family.
06–10	Differentiation.	Twelve distinct environments and grounds, two of them light.
11–14	Hierarchy.	A MIG still shows only what it owns; crossings still surface after selection.
open	The dark worlds differentiate less at thumbnail scale.	Philosophy, Business and Music are unmistakable at any size; Technology, Love and Movies converge somewhat when small. The two light grounds are carrying more of the contrast than the nine dark ones.
open	Content is placeholder in his voice	— arguable positions rather than filler, so the architecture is stressed properly. Every line is his to correct.

18–21	Colour.	Every literal classified; each world a different balance; nothing warm survives.
22–28	Quality.	No glass blur, no decorative gradients, no 3D, no neon, no dashboard.
15–17	Neurons.	No world config may carry a node or edge override — enforced.
open	No photography yet.	Observation and Food both call for photographic surfaces; both currently express it through drawn texture and framing.
open	Mobile is specified, not yet proven.	Each world has a responsive interpretation in CSS; none has been tested on a real device.
