

A PERSONAL KNOWLEDGE SYSTEM

# Siddhesh Thapa

A record of what I think, what I  
build, what I believe, and what I  
eventually realize I was wrong  
about.

---

SIDDHESHTHAPA.COM · V0.2 — DESIGN RECORD

VISUAL SYSTEM AND COGNITIVE INTERACTION MODEL · 12 AUGUST 2026

CAPTURED FROM THE WORKING PROTOTYPE AT 1440 × 900

A PERSONAL KNOWLEDGE SYSTEM

# Siddhesh Thapa

A record of what I think, what I build,  
what I believe, and what I eventually  
realize I was wrong about.

ENTER THE MIND →

Plate 01

The threshold

Almost empty on purpose. No navigation, no menu, no claim about who he is. The graph is already running behind the gradient — nodes drift, a relationship occasionally activates on its own, and fragments of thought surface and fade. The intended reading is *something is happening behind this*, which turns the single link into a question rather than a button.

Plate 02

## The mind, unexplored

Thirty-nine objects, fifty-three relationships. Only the seven recurring ideas are labelled — curiosity, desire, value, human behaviour, execution, potential, independence. Everything else earns its name by being approached. The two oxide double-rings are contradictions, visible as objects before you know what they are.

What something is worth to someone. Not what it costs, and not what it signals.

*"I think money is a poor proxy for value. It is just the only one that clears."*

SEE WHERE IT STARTED → SEE WHAT IT BECAME →

CONTRADICTION • OPEN

## curiosity vs utility

Curiosity that owes nothing, and time that must be earned. Both cannot be fully true.

2 connections. Move over one to see why it is there.

[SEE WHAT IT BECAME →](#)

[WANDER FROM HERE →](#)

[RETURN TO THE NETWORK](#)

Plate 05

Tension, held open

Contradictions are objects in the graph, not confessions buried in an essay. Two beliefs are held either side of the tension node and both edges are labelled. The site states the conflict plainly and does not resolve it: *"Curiosity that owes nothing, and time that must be earned. Both cannot be fully true."*

CONCEPT · GROWING

# curiosity

The only thing I have never had to manufacture.  
Everything else in here is downstream of it.

3 connections. Move over one to see why it is there.

SEE WHERE IT STARTED →

SEE WHAT IT BECAME →

SEE WHAT I BUILT FROM IT →

SEE WHAT CONTRADICTS IT →

WANDER FROM HERE →

RETURN TO THE NETWORK

Plate 06

A gravitational centre

Curiosity carries more connections than almost anything else in the system — a belief, an experiment, an influence, and a route into philosophy. Recurrence is the whole argument: a visitor gradually notices which ideas he keeps returning to, which is a psychological portrait rather than a stated one.

PROJECT • TESTED

# revenuepilot os

Built to close the gap between a lead arriving and anyone noticing. Half the hypothesis survived.

3 connections. Move over one to see why it is there.

[SEE WHERE IT STARTED →](#) [SEE WHAT IT BECAME →](#)

[SEE WHAT I BUILT FROM IT →](#) [WANDER FROM HERE →](#) [RETURN TO THE NETWORK](#)

Plate 07

Work, reached sideways

RevenuePilot OS is never presented as a portfolio tile. It is arrived at by following an idea — product, automation, and the belief it was built to test — and it reports what actually happened: *“A belief I tried to operationalize. Half of it survived contact with real operators.”*

# Shape means type. You learn it by using it.

Nine forms, no key on screen. A visitor works out that squares are things that got built and diamonds are things still unanswered, because the content confirms it every time they open one.

|                            |                           |                            |
|----------------------------|---------------------------|----------------------------|
| ● THOUGHT An observation   | ○ BELIEF A position held  | ⦿ CONCEPT A recurring idea |
| ◇ QUESTION Still open      | ■ PROJECT Something built | ⦿ EXPERIMENT A test run    |
| ∞ CONTRADICTION Unresolved | ⦿ INFLUENCE A person      | — REFERENCE A source       |

## GRAVITY

Seven ideas carry more connections than the rest. They are the only nodes labelled before you touch anything, and they are not drawn larger — they simply recur, which is how you notice them.

## STATES

Every object declares one: **seed**, **growing**, **formed**, **tested**, **proven**, **changed**, **open**. The site is not a record of conclusions. **Changed** and **open** appear as often as **proven**, on purpose.

# The palette and the type were the approved part.

|                                                                                   |                                                                                   |                                                                                    |                                                                                     |                                                                                     |                                                                                     |

## WHY OXIDIZED RED

Amber goes muddy against warm ivory. Acid green reads as hacker-terminal and fights the editorial serif. Oxide sits in the same warm family as the ivory, so it registers as emphasis rather than noise.

It is spent only on meaning: selection, the active relationship, contradiction rings, and the rule beside emerging content. Nothing decorative is red. Relationship verbs are deliberately dimmed oxide rather than full accent, so the selected path stays the brightest thing on screen.

## THREE TYPOGRAPHIC ROLES

**Display** — a humanist serif for concepts, beliefs and thoughts. Chosen over the brutalist grotesk this genre defaults to, which is what makes most of those pages interchangeable.

**Body** — a calm sans for explanation, never competing with the display face.

**Mono** — node labels, relationship verbs, states, metadata. Humanistic thought and computational thinking, held in one system.

# Every connection has a reason you could argue with.

Fifty-three relationships are written. None is “these are both interesting.” A sample of what a visitor uncovers by following a single thread across six disciplines:

## AI CHANGED THE ECONOMICS OF LEARNING

*“AI moved individualised instruction from prohibitively expensive to nearly free. That changes who gets to learn what.”*

## MONEY POORLY PROXIES VALUE

*“I think money is a poor proxy for value. It is just the only one that clears.”*

## 30 DAYS NO NEW INPUT REVISED EXECUTION OVER INTELLIGENCE

*“Output went up. Quality did not. That result pushed me toward execution and away from intake.”*

## REVENUEPILOT OS EVIDENCED EXECUTION OVER INTELLIGENCE

*“A belief I tried to operationalize. Half of it survived contact with real operators.”*

## PSYCHOLOGY OPERATIONALIZED AS MARKETING

*“Marketing works by identifying and shaping existing desire. It rarely creates it.”*

## CURIOSITY OWES NOTHING LED TO BOUNDARIES ARE TOOLS

*“If curiosity does not need a reason, it does not need a department either.”*

## INDEPENDENCE IS THE POINT REQUIRES BUSINESS

*“The thing I wanted independence from turned out to be the thing that funds it.”*

## PHILOSOPHY ARGUES WITH SCIENCE

*“Philosophy asks what is worth knowing. Science asks how we would check. I could not keep only one.”*

# The twelve things V0.2 had to make possible.

01 Enter the mind.

02 Select a major concept.

03 Watch the environment reorganize around it.

04 Understand why a relationship exists.

05 Open a thought without leaving the environment.

06 Follow it into another domain.

07 Reach a project through the idea that produced it.

08 Hit a contradiction.

09 Follow the contradiction out the other side.

10 Return to the whole network.

11 Wander somewhere unexpected but connected.

12 Cross six disciplines without a subjects menu.

## VERIFIED

The traversal curiosity → 30 days no new input → execution over intelligence → execution → business → product → RevenuePilot OS was walked programmatically against the working prototype. Six domains, no subjects menu, criterion 12 satisfied.

## STILL OPEN

Copy is his-voice placeholder — written as real positions rather than layout filler, which means several lines are arguable. That is the point, but they are his to correct.

The workshop and terminal remain mockups. The brief says validate the cognitive interaction first, and both are content containers rather than thinking machines.
