

Siddhesh Thapa

SUMMARY

Personal website project for siddheshthapa.com as a public-facing “copy of my brain”: a living archive of thoughts, beliefs, observations, philosophical ideas, business thinking, personal principles, writing, experiments, projects, and intellectual evolution.

EXPERIENCE

since the last 3 years

Multiple businesses and startups

I've been a part of many businesses and startups and helped them with Marketing, content writing, positioning and building their online presence. Website designing and proofreading has been a part of my job since the last 3 years.

- Helped with marketing, content writing, positioning, and building online presence.
- Website designing and proofreading has been a part of the job since the last 3 years.

Research and technology startup (defence context)

Our startup is a research and technology business at its core, prioritised towards building breakthrough and independent tech that does not depend on tech from any other country.

- Primary products include kamikaze drones for the Indian army to target enemies from a safer distance, reduce risk of losing lives, and increase targeting accuracy.
- Work for the Indian army as target customer.
- Design process includes idea generation, market research, consulting veteran and experienced soldiers, working with soldiers during training, continuous feedback, iteration, and participation in government procurement/bidding.
- Soldiers train with the team almost every day, approximately 6 days a week excluding government holidays.
- Challenges mentioned: financial constraints as a bootstrapped young startup and testing environment constraints due to not owning dedicated land.

PROJECTS

siddheshthapa.com | Personal website / “copy of my brain”

- Intended as a living archive of beliefs, ideas, essays, projects, experiments, learning, questions, contradictions, and intellectual evolution.
- Major section: “My Beliefs.”

COTSI course-personalisation idea | Feature concept for a Claude skill called COTSI

- Trigger: /cotsi I want a course on [topic name].
- Should ask diagnostic questions first (Yes/No and multiple-choice only) instead of generating a generic beginner course.
- Determine current level (beginner to highly advanced) and then build a course from actual knowledge level.
- Philosophy: “A good tutor diagnoses before teaching.”

TECHNICAL SKILLS

Marketing

Content writing

Positioning

Building online presence

Website designing

Proofreading

Design thinking
User feedback and iteration
Market research

WRITING / THINKING STYLE

Philosophical observation, existential thinking, business/founder thinking, skepticism, curiosity, social commentary, dark/dry humor, Gen-Z internet language, concise aphorisms, and reflective monologues.

CORE PHILOSOPHICAL THEMES

Unrealised potential; Curiosity over utility; Action over potential; Value over money; Intellectual independence; Human complexity.

IMPORTANT PHRASES / CONCEPTUAL ANCHORS

“To be kind is rebellion enough.”; “But the lotus blooms anyway.”; “The man you had the potential to be.”; “Life comes in a package.”; “We divided knowledge for the sake of understanding it, but we shouldn't let those divisions limit our curiosity.”; “You need value more than money in order to make money.”; “Consistent execution > untapped intelligence.”; “People worship wealth, not its source.”; “First comes desire, then comes justification.”; “Disciplinary boundaries are tools, not walls.”; “Access → insight → better decisions → better product.”
