

A PERSONAL KNOWLEDGE SYSTEM

Siddhesh Thapa

A record of what I think, what I
build, what I believe, and what I
eventually realize I was wrong
about.

SIDDHESHTHAPA.COM · V0.4 — TWELVE WORLDS, ONE MIND

12 MIGS · 57 MINOR IGS · 93 EXPLAINED RELATIONSHIPS · 12 AUGUST 2026

CAPTURED FROM THE WORKING PROTOTYPE AT 1440 × 900

A PERSONAL KNOWLEDGE SYSTEM

Siddhesh Thapa

A record of what I think, what I build,
what I believe, and what I eventually
realize I was wrong about.

was playing.*

Plate 01

The threshold

Unchanged since V0.1. No navigation, no menu, no claim about who he is. The map runs behind the gradient — regions drift, a relationship occasionally activates on its own, fragments of thought surface and fade. The single link reads as a question rather than a button.

Plate 02

Twelve gravitational centres

Entry shows the MIGs — Major Intellectual Gravitational centres — over faint territory. Everything else is present and unnamed until approached. Twelve labels is the entire budget at this level, and it is the only screen where a visitor is asked to choose without context.

Plate 06 · world four

Love, without the clichés

Paired forms either side of a gap, the widest negative space in the system, and edges that approach without quite touching. Attachment, vulnerability, intimacy, distance. No hearts, no pink, no wedding-site vocabulary — treated with the same seriousness as Philosophy, which is the only way it earns its place.

CONCEPT • FORMED

desire

The engine underneath most behaviour I used to explain with better-sounding words.

5 connections. Move over one to see why it is there.

Plate 07

Where an idea leaves home

Selecting a minor IG reorganizes the world around it and, underneath the writing, names the borders it can be carried across — *this idea crosses into human behaviour, via psychology*. Crossings never clutter the opening view of a MIG. They appear once an idea has been chosen, which makes leaving a decision rather than a distraction.

CONCEPT • FORMED

desire

The engine underneath most behaviour I used to explain with better-sounding words.

DESIRE STUDIED AS PSYCHOLOGY

“Psychology is where I go to check whether what I noticed about wanting is real or merely mine.”

Plate 08

The relationship is still the content

Preserved from V0.2 and enforced by a validator. The verb rides the line; approaching a neighbour surfaces the reasoning in his voice. Direction is load-bearing — the verb renders in the edge's own order, never the reader's, because reversing it silently inverts the claim.

Ownership replaced membership.

The V0.3 model let a node name several regions as equal parents, which is exactly why Business's `value` could appear inside Philosophy. V0.4 makes ownership singular without rebuilding the walls the whole site argues against.

ONE OWNER, DECLARED UPWARD

`mig` is the single owning region, and it alone decides what a MIG environment contains. A MIG still holds no list — ownership is declared by the member, so a region cannot quietly acquire ideas.

BORDERS, NOT WALLS

`crosses` names the other MIGs an idea reaches. It drives where the node sits on the world map, and it produces the “this idea crosses into...” affordance — but only after something has been selected.

All 57 minor IGs declare at least one crossing.

THE NAMING TRAP

MIGs use `x/y` as map coordinates. Crossings were first written to a field also called `x` — and the layout pass assigns `n.x` a number for every node, destroying every crossing list at load.

The field is `crosses` for that reason. The acceptance test caught it before a frame was ever rendered.

Twelve worlds, one palette.

Each MIG owns a background motif, an arrangement for its minor IGs and an edge style, plus drift, node scale and letter-spacing. Twelve distinct motifs and twelve distinct arrangements — and not one colour outside the eleven approved values. The build fails if a world introduces one.

MIG	MOTIF	ARRANGEMENT	EDGES	READS AS
philosophy	concentric	wide circle	straight	a quiet room where someone is thinking
human behaviour	overlap	mirrored arcs	curve	a social system observing itself
business	grid	columns	step	strategy being constructed
technology	lattice	lattice	orthogonal	modular and precise, never cyberpunk
building	blueprint	assembly row	tick	things mid-construction
learning	branch	branching	curve	paths that fork and fork again
observation	notes	scatter	dashed	field notes and marginalia
life	cycles	timeline	straight	one direction, and cycles inside it
music	waveform	wave	arc	rhythm and duration
movies	frames	strip	cut	framing and sequence
food	grain	cluster	curve	close, tactile, no ceremony
love	paired	facing	gap	proximity and the distance across it

One chevron, and a real stack behind it.

The bottom-centre button is gone. A bare < sits top-left, appears only when there is somewhere to go, and pops one level rather than jumping home. Verified headlessly six levels deep against the journey the brief specifies:

world → philosophy → desire → psychology → status → money → value

< money < status < psychology < desire < philosophy < world – control disables

EVERYTHING THAT MOVES YOU, PUSHES

Wander records every hop it takes, so a four-hop associative drift can be retraced one step at a time rather than dumping you somewhere unexplained. Clicking empty space and pressing Escape both step back, instead of ejecting to the top.

THE RIM IS STILL THE ANTI-TREE

Inside any world the other eleven MIGs remain on screen at their real bearing from the map. Orientation never hardens into navigation: from Music you can see Philosophy where Philosophy actually lies and go there directly, which is what keeps a hierarchy from becoming a menu.

UNCHANGED SINCE V0.1

The palette survived four iterations.

 OBSIDIAN #0B0B0D	 VOID #08080A · the field	 HAIRLINE #2A2A30	 WARM IVORY #E9E5DA	 OXIDIZED RED #C4432B · signature	 OXIDE DIM #6E2618
--	--	---	--	--	---

MIGS ARE DELIBERATELY NOT COLOUR-CODED

Twelve hues would be instantly legible and would rebuild precisely the subject taxonomy the site argues against. Worlds are told apart by geometry, motif, density and motion instead — which is the harder solution and the correct one.

Red stays semantic throughout: selection, the active relationship, contradiction rings, relationship verbs, and the rule beside emerging content.

SAMPLE RELATIONSHIPS

PSYCHOLOGY ACCOUNTS FOR STATUS

"Most of what presents itself as ambition is a status calculation nobody said out loud."

DISCIPLINE BUYS FREEDOM

"Discipline is what freedom costs, which is an annoying thing to be true."

INTIMACY OPPOSED BY DISTANCE

"The thing I am good at, which is a sentence worth sitting with rather than defending."

Thirty criteria, checked by machine.

Two validators parse the arrays straight out of the page rather than trusting a read-through. They caught two real defects this iteration: a field-name collision that destroyed every crossing list at load, and a missing edge that broke the brief's own worked journey.

01-04	MIG hierarchy.	A MIG shows only what it owns; crossings surface after a selection.
-------	----------------	---

05-09	Navigation.	Bottom button gone; chevron top-left over a stack, traced six levels.
-------	-------------	---

10-16	MIG worlds.	Twelve distinct motifs and arrangements, one palette, one grammar.
-------	-------------	--

open	Nine MIGs carry four minor IGs each.	Philosophy, Business and Music were furnished first, as instructed.
------	--------------------------------------	---

open	Content is placeholder in his voice	— arguable positions rather than filler, so the architecture is stressed properly.
------	-------------------------------------	--

17-20	Cross-MIG.	The brief's \$20 journey crosses four MIGs; every MIG reaches every other in ≤ 5 hops.
-------	------------	---

21-26	Visual quality.	No gradients-as-decoration, neon, glass or rounded cards — checked by regex.
-------	-----------------	--

27-30	Production cleanliness.	The design record lives in a separate handbook, not on the site.
-------	-------------------------	--

open	The other nine worlds have had less art direction.	They render and they are distinct; review before adding content.
------	--	--

open	Motion is untested on low-end hardware.	The field and motif layers are cached; the node loop is not yet profiled.
------	---	---
